

# *Abstract*

We are living in the era where everything is becoming automated including the sector of education where number of latest technology methods have been used. However, there is still the use of old traditional methods when it comes to taking exams. These traditional methods have many limitations and problems associated with them. So we have focused on an automated evaluation system. It is a descriptive answer evaluating system based on Natural Language processing techniques. This model consists of checking semantic as well syntactic nature of the answers.
