

ABSTRACT

Leadership is a method of influence which the leader leads and guides his team to achieve some targets. There are many studies that have measured leadership impact on employs and students performance. There are mainly two types of leadership task oriented and people oriented. To determine leadership style famous T-P Leadership questionnaire was used.

A sample of 252 students was selected from 6 Universities and colleges of the Lahore. The two-stage cluster sampling technique was used and sample was taken from each university by using proportional allocation method. A self-administered questionnaire is used for collecting data. In inferential measures testing of hypothesis through proportion test and correlation Test were applied to find out the association and proportion between two variables.

The results show that most of the universities and colleges in Lahore are the task oriented. It also suggest that leadership role is playing very important role for improving the performance of the students.
