

# Summary

A fishery survey of river Brandu in District Buner was carried out from November 2002 to September 2003. The present work is aimed at the study of fish fauna and its relation to some ecological factors like temperature, pH, and stream bed conditions in various localities along the river. Collections were made during trips from November 2002 to September 2003 using mesh cloth hand nets and cast nets. Specimens were preserved in 10% solution of formalin in plastic bottles. Temperature, water pH, transparency and physical condition of the bed was noted. The present collection consists of 15 species belonging to 11 genera 3 sub families and 6 families.
