

SUMMARY

The present research work is the study of fish fauna of river Unar and Darband pocket. The River Unar is originated near the Dalbori. River passes on the Oghi and finally enter into river Indus by Darband pocket. Collections were made periodically in three trips from April 2002 to August 2002. The collections were made from Dalbori (the origin of river Unar), Oghi, Shergarh, Nanasari, and Darband Pocket

The collections were made by using hand nets, mesh cloth. Specimens were preserved in 10% formalin. The preserved fishes were transported to laboratory. The identification and Measurements of Specimens had done by using key to fishes and the scale respectively. The photographs of Specimens were taken in the laboratory before any color change could take place. The present collection consist of following Species.

Schistura alepidota, *Schistura microlabra* and *Schistura lindbergi* are common in Dalbori and Oghi. *Schizothorax plagiostomus* and *Puntius conchoniis* are common in Darband pocket and Nanasari

Crossocheilus diplocheilus is dominant in the Darband pocket, Nanasari, Shergarh and Oghi. *Tor putitora* was collected from the Darband pocket.

Barilius pakistanicus and *Barilius vagra* are dominant in Darband Pocket and Nanasari. *Chanda nama* is common in Darband pocket. *Aspidoparia morar* is dominant in Darband pocket. *Mastacembelus armatus* was collected from Nanasari and Shergarh
