

Abstract

Lately China's multibillion dollar BRI project that is being discussed in academic and intellectual circles which has potential to change the dynamics of world order. Thereby, this dissertation is based on analysis of China's Belt and Road Initiative(BRI). It delves into the China burgeoning economic role through BRI in the world. Within this context, The main objective behind this research is to vet the benefits of BRI for China through which she is asserting her role in the world as a soft power and intends to be economically advanced, technological modernized and Industrial state in the world. Basically BRI embodies 6 corridors which will connect China with approximately more than 70 countries of Asia, Europe and Africa. Thus China expands its experts in many fields and enhances its political and strategic influence throughout the world. Furthermore this study also analyzes that how predominant developmental projects make China in the world and whether they only advances its own national interest or facilitates the corridors too.

Moreover, this research also addresses the challenges which are being faced by China to accomplish its connectivity project that how western countries are containing China through their strategies. Along with that conceptual framework of the study is based on different variables like political, strategic and economic benefits and challenges for china. Besides that, Qualitative research was conducted to collect the relevant data based on interviews of experts. Then, the collected information was conglomerated into the Super Ordinate themes, sub themes and then critically vetted forthwith.

Furthermore, to put two and together this research also dole out some suggestions in order to navigate the challenges of changing scenario and what should be the onus on the governments of Belt and Road Initiative partner countries and Role of China in accomplishing this project.
